Experiment No: 05

Experiment Name: Comparative Analysis of Wired and Wireless data using Wireshark

Objectives: We have to find out the Wired data packages Using the Wireshark in order to compare with the wireless data packages. Filter the packages. Find out the host, IP of the data packages. Create the Statistics for both of the data packages. Finally compare the wired and wireless data packages simultaneously with the help of Wireshark.

Capturing Packets:

We need to start Capturing on interface that has IP address/Source/Host.

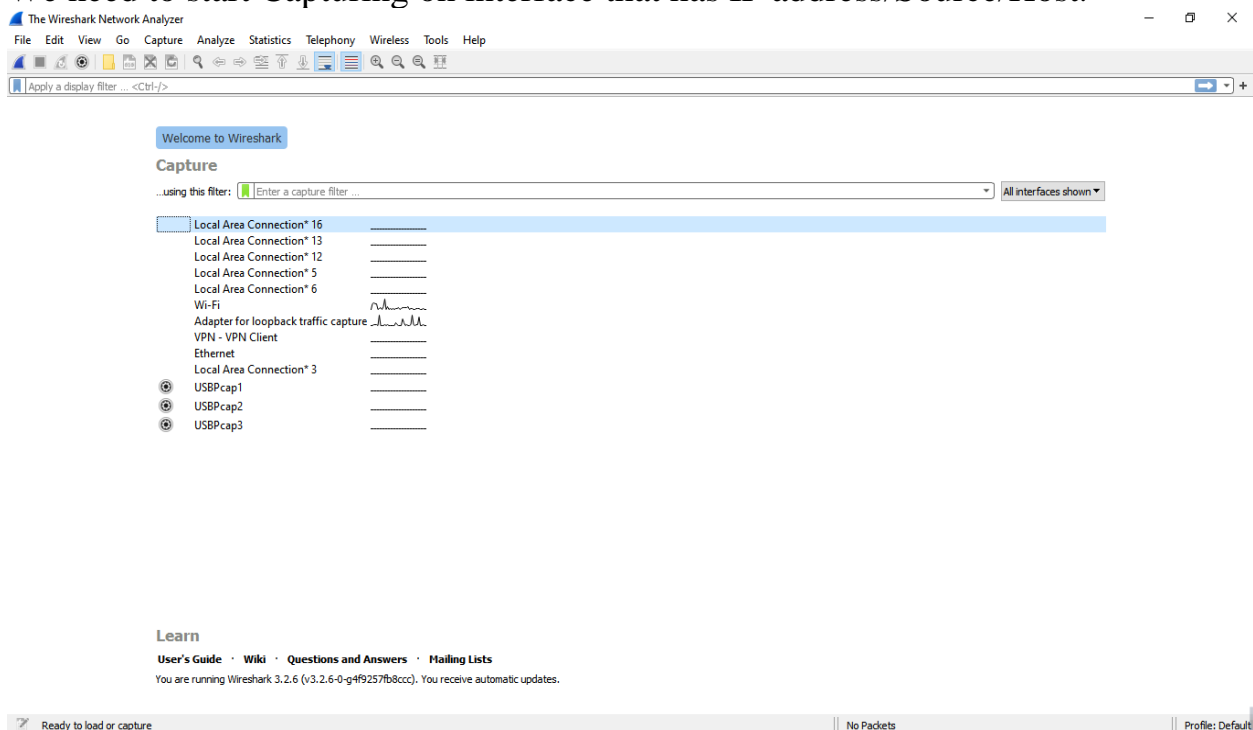

Figure 01: Wireshark Interface List

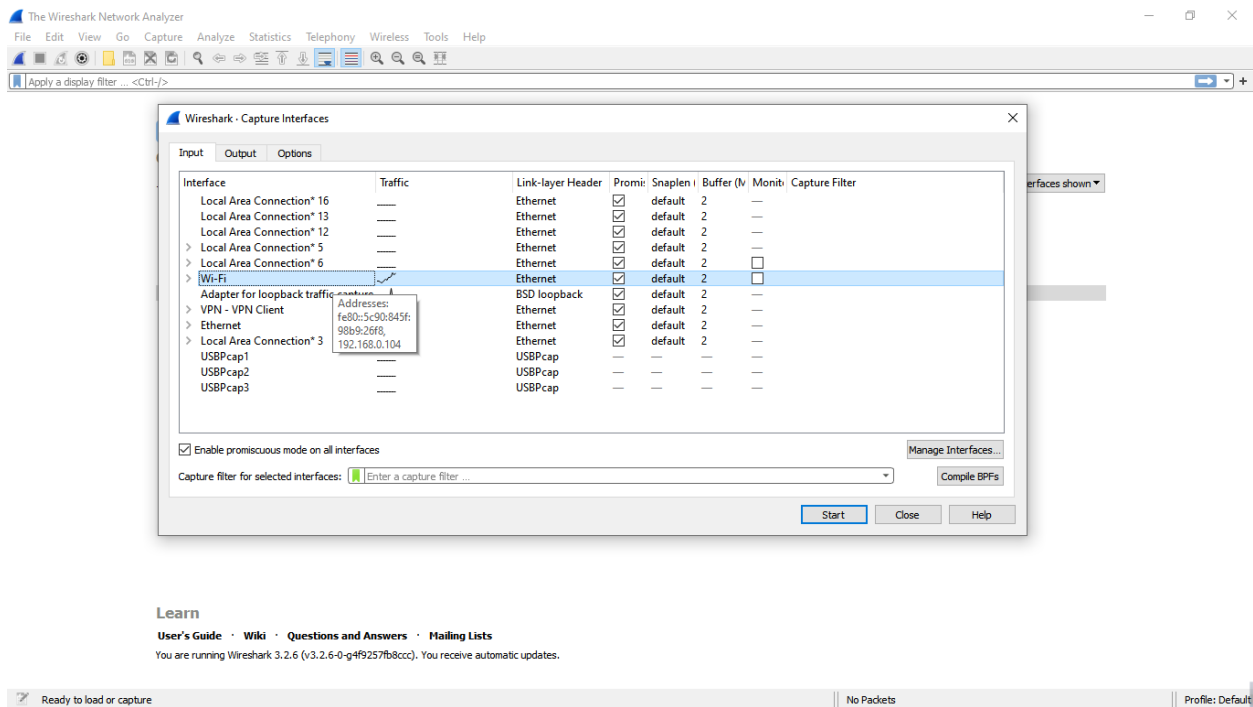

Figure 02-A: Start Capturing Interface that has for Wi-Fi (Wireless)

Figure 02-B: Start Capturing Interface that has for USB Tethering(Wired)

Figure 03-A: A sample packet capture window for Wireless Data Pack

Figure 03-B: A sample packet capture window for Wired Data Pack

Figure 04-A: Stopping Capture for Wi-Fi (Wireless)

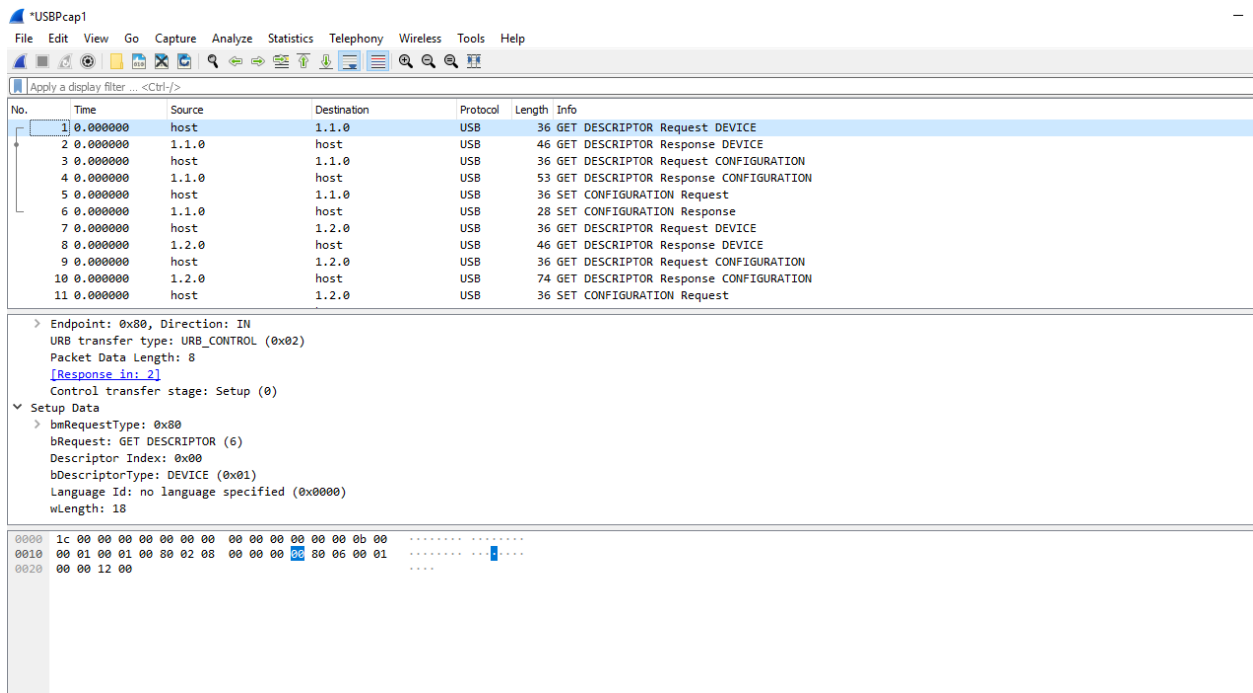

Figure 04-B: Stopping Capture for Wi-Fi (Wired)

Filtering:

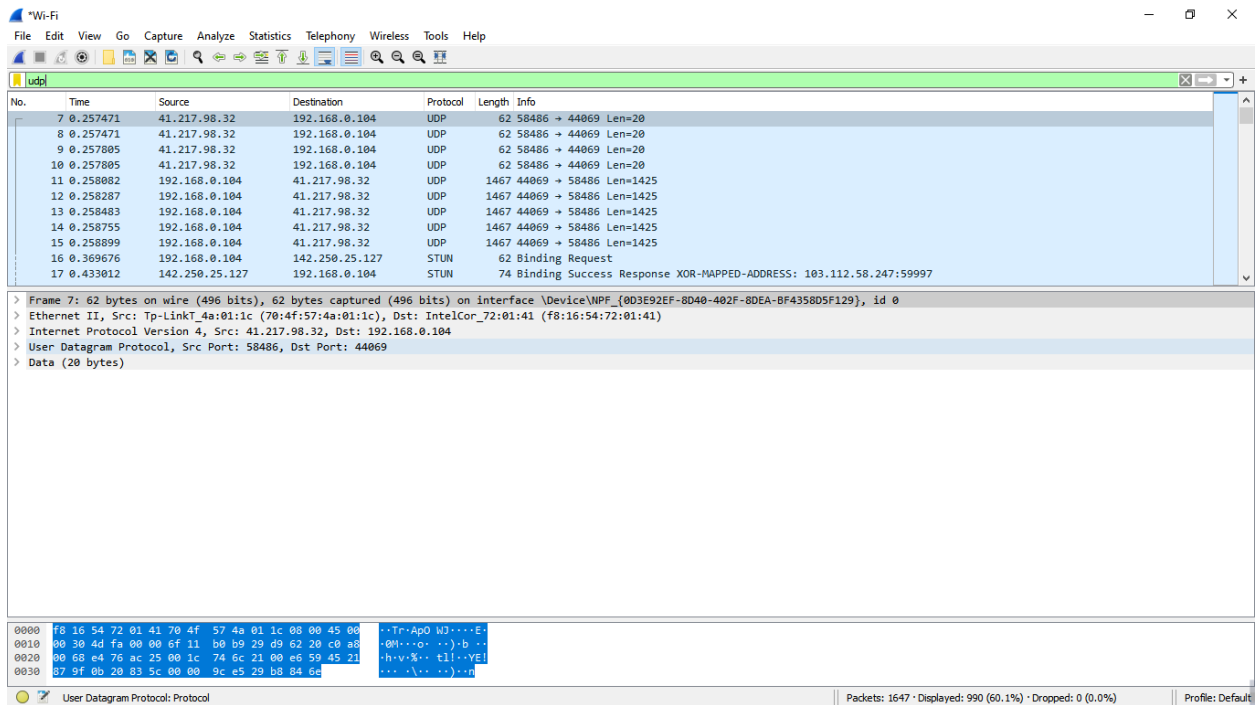

Figure 05-A: Filter by Protocol Wireless Data Packages

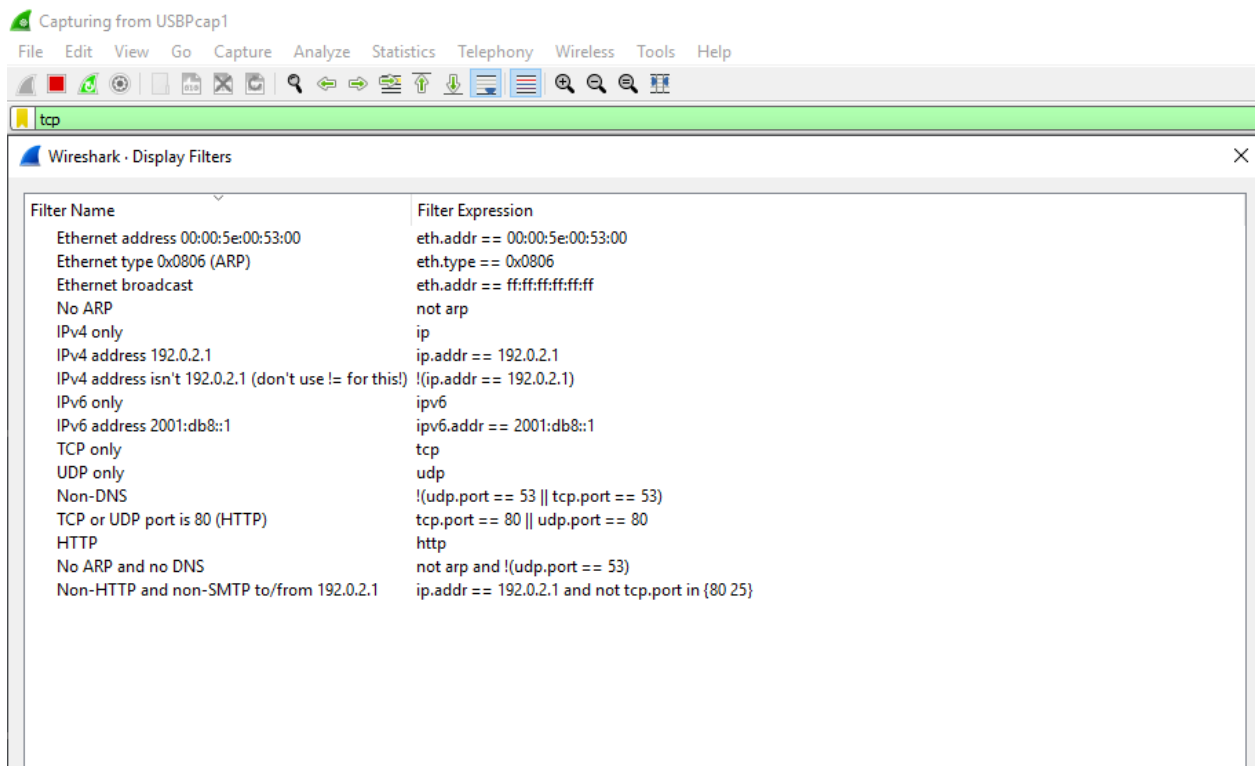

Figure 05-B: Filter by Protocol Wired Data Packages

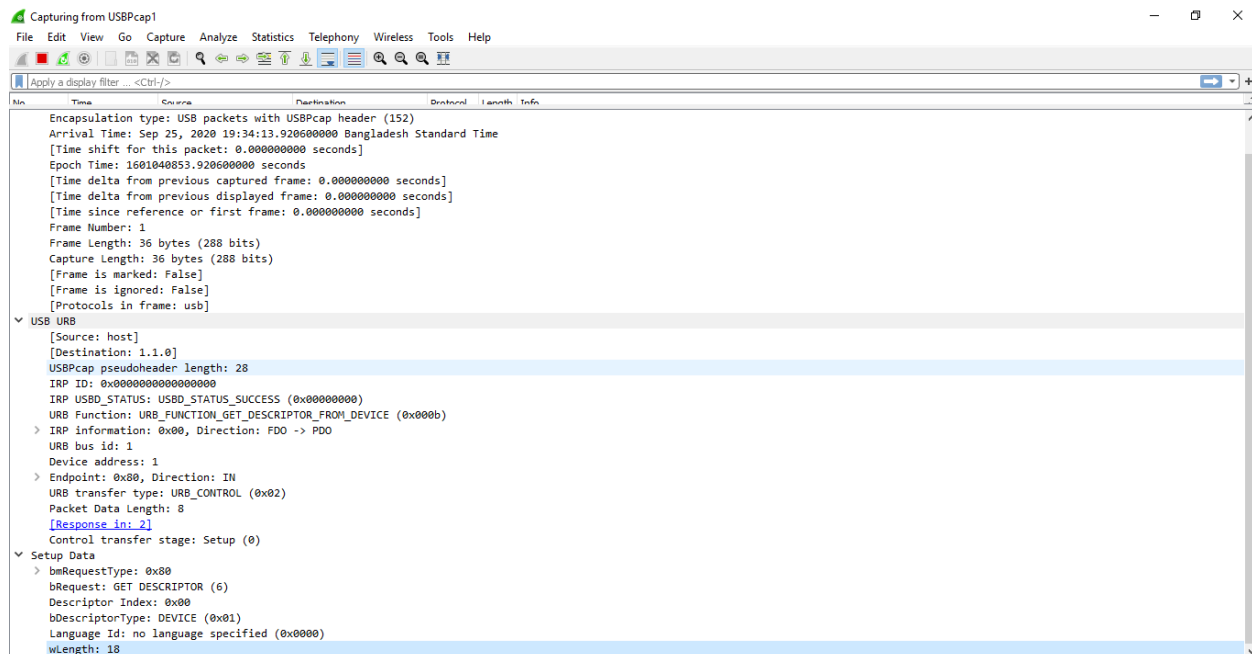

Figure 06-A: Packet Details Pane (Frame segment) for Wired Data Packages.

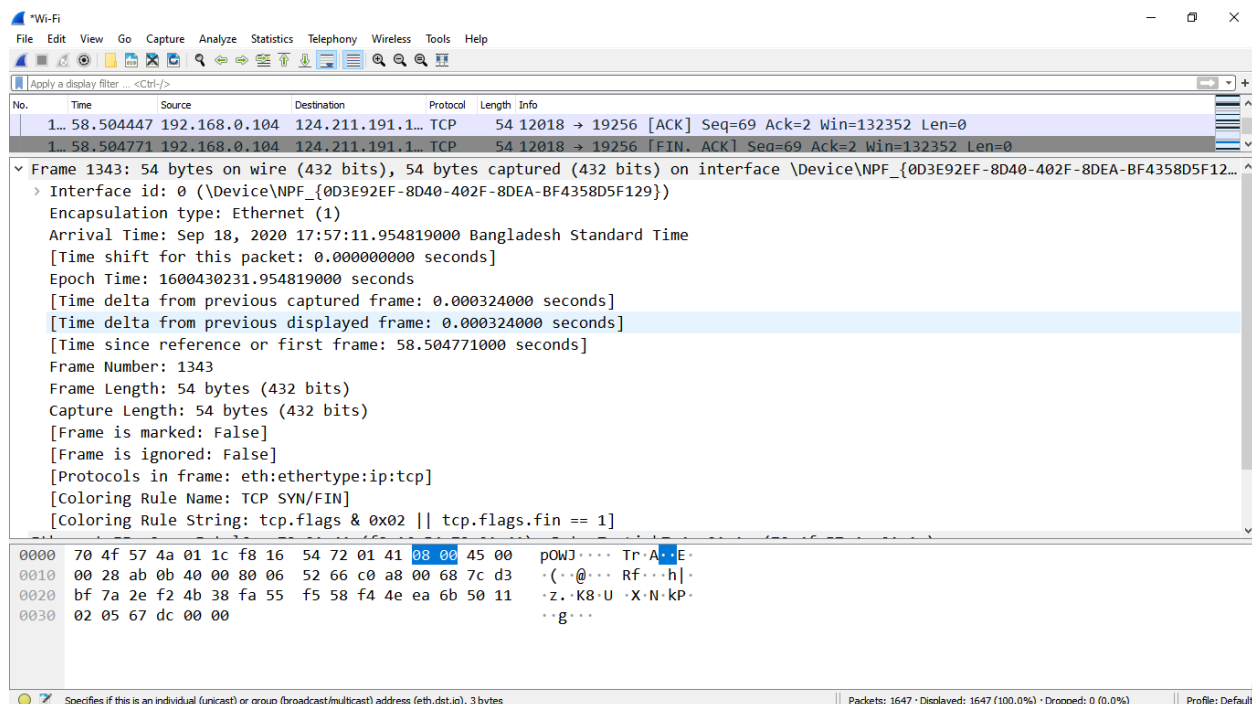

Figure 06-B: Packet Details Pane (Frame segment) for Wireless Data Packages.

Figure 07-A: Packet Byte Pane for Wireless (USB Tethering)

Figure 07-B: Packet Byte Pane (For Wi-Fi)

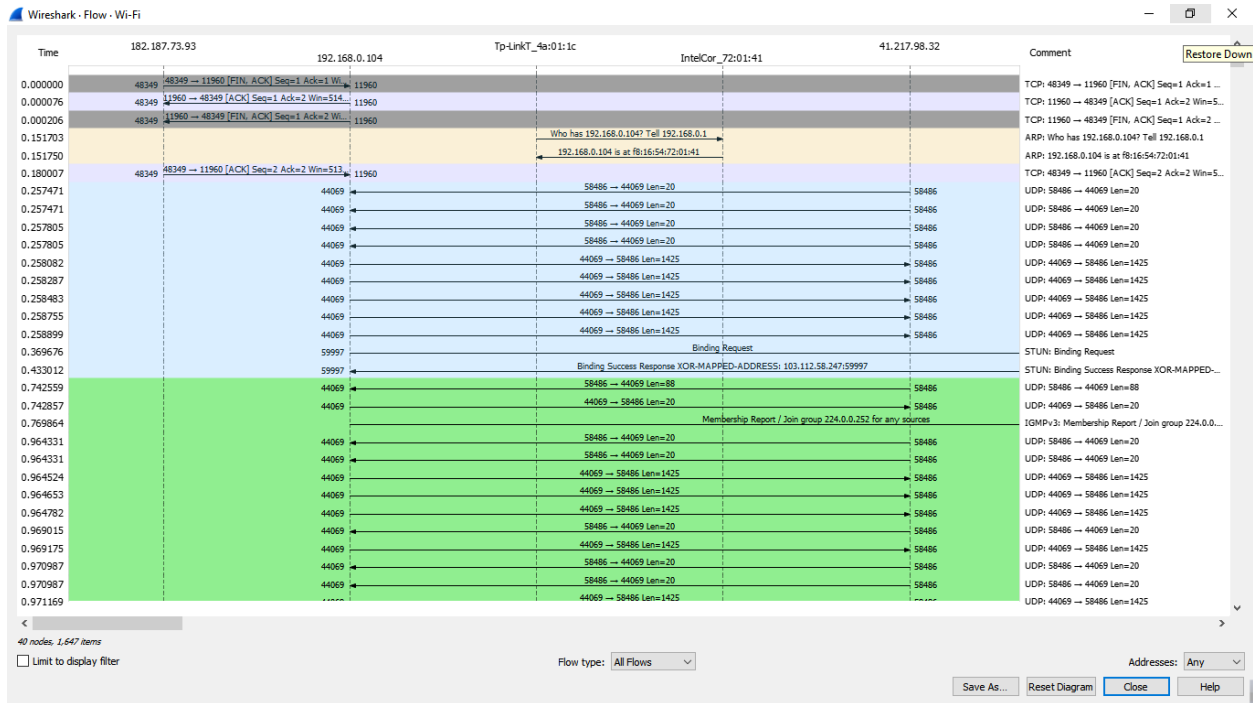

Figure 08-A: Statistics- Flow Graph -All Flows for Wi-Fi (Wireless Data Packages)

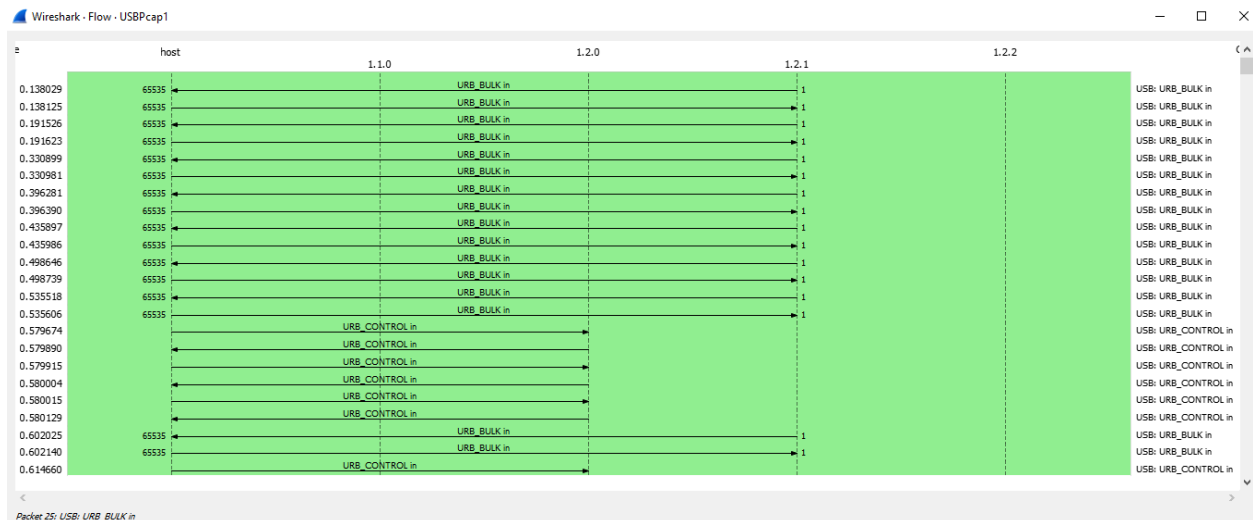

Figure 08-B: Statistics- Flow Graph -All Flows for Wi-Fi (Wired Data Packages)

Conclusion:

Wired network is much more efficient than wireless network. Because Wired data packages transfer rate are very much smoother than Wireless. Wired data are more secure and high speed.
